

# LITH TACK EP00 MSDS

### SECTION 1 - IDENTIFICATION OF THE MATERIAL AND SUPPLIER

Product Name: LITH TACK EP00

**Product Use:** Grease for Automotive and Industrial use.

Supplier: Vertex Lubricants NZ

22 Marphona Crescent

Takanini 2105

Phone: 09/640 0004

Email: info@vertexlubricants.co.nz

**Emergency Number:** 0800 353 645

Chemical Nature: Oil mineral, Zinc alkyl dithiophosphate Phosphoric acid esters, amine salt

**Issue Date:** 19 July 2024 and is valid for 5 years from this date.

### **SECTION 2 – HAZARDS IDENTIFICATION**

**HSNO Classification** Not classified.

This material is not classified as hazardous according to criteria in the Hazardous Substances (Hazard Classification)

Notice 2020

This material is not classified as DANGEROUS GOODS according to criteria in New Zealand Standard 5433:2012 Transport of Dangerous Goods on Land.

**GHS label elements** 

Signal word No signal word.

**Hazard statements** No known significant effects or critical hazards.

**Precautionary statements** 

PreventionNot applicable.ResponseNot applicable.StorageNot applicable.DisposalNot applicable.

Other hazards which do not

**not** Note: High Pressure Applications

result in classification Injection

Injections through the skin resulting from contact with the product at high pressure

constitute a major medical emergency.

See 'Notes to physician' under First-Aid Measures, Section 4 of this Safety Data

Sheet.

### SECTION 3 – COMPOSITION / INFORMATION ON INGREDIENTS

Substance/mixture: Mixture

Highly refined base oil (IP 346 DMSO extract < 3%). Proprietary performance additives.

Ingredient name	% (w/w)	CAS number	
Oil, mineral	≥90	8012-95-1	
Zinc alkyl dithiophosphate	<1.9	68649-42-3	
Phosphoric acid esters, amine salt	<0.6	91745-46-9	

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health or the environment and hence require reporting in this section.

Occupational exposure limits, if available, are listed in Section 8.

The information contained in this Product Data Sheet is accurate at the time of printing and is subject to change without prior notice.

® Vertex is a registered trademark of Lubricants NZ Ltd.

### **SECTION 4 – FIRST AID MEASURES**

Description of necessary first aid measures

**Inhalation** If inhaled, remove to fresh air. In case of inhalation of decomposition products in a fire,

symptoms may be delayed. The exposed person may need to be kept under medical

surveillance for 48 hours. Get medical attention if symptoms occur.

**Ingestion** Do not induce vomiting unless directed to do so by medical personnel. Get medical

attention if symptoms occur.

Skin contact Wash skin thoroughly with soap and water or use recognised skin cleanser. Remove

contaminated clothing and shoes. Wash clothing before reuse. Clean shoes thoroughly before reuse. Get medical attention if symptoms occur. If skin irritation or rash occurs: Get

medical advice/attention.

Eye contact In case of contact, immediately flush eyes with plenty of water for at least 15 minutes.

Eyelids should be held away from the eyeball to ensure thorough rinsing. Check for and

remove any contact lenses. Get medical attention.

Indication of immediate medical attention and special treatment needed, if necessary

**Notes to physician** Treatment should in general be symptomatic and directed to relieving any effects.

Note: High Pressure Applications Injections through the skin resulting from contact with the product at high pressure constitute a major medical emergency. Injuries may not appear serious at first but within a few hours tissue becomes swollen, discoloured and

extremely painful with extensive subcutaneous necrosis.

Surgical exploration should be undertaken without delay. Thorough and extensive debridement of the wound and underlying tissue is necessary to minimise tissue loss and prevent or limit permanent damage. Note that high pressure may force the product

considerable distances along tissue planes.

**Protection of first aiders** No action shall be taken involving any personal risk or without suitable training.

### **SECTION 5 – FIRE FIGHTING MEASURES**

**Extinguishing media** 

Suitable In case of fire, use water fog, alcohol resistant foam, dry chemical or carbon dioxide

extinguisher or spray.

**Not suitable** Do not use water jet.

Specific hazards arising

from the chemical

**Hazardous combustion** 

Combustion products may include the following: carbon oxides (CO, CO2) (carbon monoxide, carbon dioxide)

products
Hazchem code

Not available

Special precautions for

Special precauti

No action shall be taken involving any personal risk or without suitable training. Promptly

**firefighters** isolate the scene by removing all persons from the vicinity of the incident if there is a fire. **Special protective** Fire-fighters should wear appropriate protective equipment and self-contained

equipment for fire-

breathing apparatus (SCBA) with a full face-piece operated in positive pressure

In a fire or if heated, a pressure increase will occur, and the container may burst.

**fighters** mode.

### **SECTION 6 – ACCIDENTAL RELEASE MEASURES**

Personal precautions, protective equipment and emergency procedures

For non-emergency

personnel

No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilt material. Floors may be slippery; use care to avoid falling. Put

on appropriate personal protective equipment (see Section 8).

For emergency responders

If specialised clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. See also the information in "For non-

emergency personnel".

The information contained in this Product Data Sheet is accurate at the time of printing and is subject to change without prior notice.

® Vertex is a registered trademark of Vertex Lubricants NZ Ltd.

Environmental precautions

Avoid dispersal of spilt material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution

(sewers, waterways, soil or air).

Methods and material for containment and cleaning up

Small spill Stop leak if without risk. Move containers from spill area. Absorb with an inert material

and place in an appropriate waste disposal container. Dispose of via a licensed waste

disposal contractor.

Large spill Stop leak if without risk. Move containers from spill area. Prevent entry into sewers, water

courses, basements or confined areas. Contain and collect spillage with noncombustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations (see Section 13). If emergency personnel are unavailable, contain spilt material. Suction or scoop the spill into appropriate disposal or recycling vessels, then cover spill area with oil absorbent. Dispose of via a

licensed waste disposal contractor.

# **SECTION 7 – HANDLING AND STORAGE**

Precautions for safe handling

Put on appropriate personal protective equipment (see Section 8). Wash thoroughly after handling. Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Remove contaminated clothing and protective equipment before entering eating areas. Workers should wash hands and face before eating, drinking and smoking. See also Section 8 for additional information on hygiene measures.

Conditions for safe storage, including any incompatibilities

Store in accordance with local regulations. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10) and food and drink. Keep container tightly closed and sealed until ready for use. Store and use only in equipment/containers designed for use with this product. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabelled containers. Use appropriate containment to avoid environmental contamination.

**Not suitable** Prolonged exposure to elevated temperature

## SECTION 8 – EXPOSURE CONTROLS AND PEROSNAL PROTECTION

### **Control parameters**

**Occupational exposure limits** 

Ingredient name	Exposure limits	
Base oil - unspecified	NZ HSWA 2015 - GRWM 2016 (New	
	Zealand).	
	WES-STEL: 10 mg/m³ 15 minutes. Issued/ Revised:	
	9/2010 Form: Mist	
	WES-TWA: 5 mg/m <sup>3</sup> 8 hours. Issued/	
	Revised: 6/2016 Form: Mist	

# **Biological exposure indices**

No exposure indices known

Recommended monitoring procedures

If this product contains ingredients with exposure limits, personal, workplace atmosphere or biological monitoring may be required to determine the effectiveness of the ventilation or other control measures and/or the necessity to use respiratory protective equipment. Reference should be made to appropriate monitoring standards. Reference to national guidance documents for methods for the determination of hazardous substances will also be required.

The information contained in this Product Data Sheet is accurate at the time of printing and is subject to change without prior notice.

\* Vertex is a registered trademark of Vertex Lubricants NZ Ltd.

# Material Safety Data Sheet

# Appropriate engineering controls

Provide exhaust ventilation or other engineering controls to keep the relevant airborne concentrations below their respective occupational exposure limits. All activities involving chemicals should be assessed for their risks to health, to ensure exposures are adequately controlled. Personal protective equipment should only be considered after other forms of control measures (e.g. engineering controls) have been suitably evaluated. Personal protective equipment should conform to appropriate standards, be suitable for use, be kept in good condition and properly maintained.

Your supplier of personal protective equipment should be consulted for advice on selection and appropriate standards. For further information contact your national organisation for standards. The final choice of protective equipment will depend upon a risk assessment. It is important to ensure that all items of personal protective equipment are compatible.

# Environmental exposure controls

Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.

### **Individual protection measures**

Hygiene measures

Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.

Eye protection Hand protection Safety glasses with side shields.

Wear protective gloves if prolonged or repeated contact is likely. Wear chemical resistant gloves. Recommended: Nitrile gloves. The correct choice of protective gloves depends upon the chemicals being handled, the conditions of work and use, and the condition of the gloves (even the best chemically resistant glove will break down after repeated chemical exposures). Most gloves provide only a short time of protection before they must be discarded and replaced. Because specific work environments and material handling practices vary, safety procedures should be developed for each intended application. Gloves should therefore be chosen in consultation with the supplier/manufacturer and with a full assessment of the working conditions.

Skin protection

Use of protective clothing is good industrial practice. Cotton or polyester/cotton overalls will only provide protection against light superficial contamination that will not soak through to the skin. Overalls should be laundered on a regular basis. When the risk of skin exposure is high (e.g. when cleaning up spillages or if there is a risk of splashing) then chemical resistant aprons and/or impervious chemical suits and boots will be required. Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

Respiratory protection

In case of insufficient ventilation, wear suitable respiratory equipment. The correct choice of respiratory protection depends upon the chemicals being handled, the conditions of work and use, and the condition of the respiratory equipment. Safety procedures should be developed for each intended application. Respiratory protection equipment should therefore be chosen in consultation with the supplier/manufacturer and with a full assessment of the working conditions. Respiratory protection should conform to AS/NZS 1715 and AS/NZS 1716.

### **SECTION 9 – PHYSICAL AND CHEMICAL PROPERTIES**

The conditions of measurement of all properties are at standard temperature and pressure unless otherwise indicated.

### **SECTION 10 – STABILITY AND REACTIVITY**

**Chemical stability** The product is stable.

Possibility of hazardous Under normal conditions of storage and use, hazardous reactions will not occur. Under

reactions normal conditions of storage and use, hazardous polymerisation will not occur.

**Conditions to avoid** Avoid all possible sources of ignition (spark or flame).

**Incompatible materials** Reactive or incompatible with the following materials: oxidising materials.

Hazardous decomposition Under normal conditions of storage and use, hazardous decomposition products should

**products** not be produced.

# **SECTION 11 – TOXICOLOGICAL INFORMATION**

### Information on likely routes of exposure

InhalationNo known significant effects or critical hazards.IngestionNo known significant effects or critical hazards.Skin contactNo known significant effects or critical hazards.Eye contactNo known significant effects or critical hazards.

### Symptoms related to the physical, chemical and toxicological characteristics

InhalationNo specific data.IngestionNo specific data.Skin contactNo specific data.Eye contactNo specific data.

# Potential chronic health effects

**General** No known significant effects or critical hazards.

**Inhalation** Inhalation of oil mist or vapours at elevated temperatures may cause respiratory

irritation.

**Ingestion** Ingestion of large quantities may cause nausea and diarrhea.

**Skin contact** Prolonged or repeated contact can defat the skin and lead to irritation, cracking and/

or dermatitis.

**Eye contact** Potential risk of transient stinging or redness if accidental eye contact occurs.

**Carcinogenicity**No known significant effects or critical hazards. **Mutagenicity**No known significant effects or critical hazards.

The information contained in this Product Data Sheet is accurate at the time of printing and is subject to change without prior notice.

Teratogenicity
No known significant effects or critical hazards.

Developmental effects
No known significant effects or critical hazards.

Fertility effects
No known significant effects or critical hazards.

### **SECTION 12 – ECOLOGICAL INFORMATION**

**Ecotoxicity** No known significant effects or critical hazards.

Persistence and degradability

Expected to be biodegradable.

**Bioaccumulative potential** 

This product is not expected to bioaccumulate through food chains in the environment.

Mobility in soil

**Mobility** Spillages are unlikely to penetrate the soil.

Soil/water partition Not available.

coefficient (KOC)

**Other ecological** This product is unlikely to disperse in water.

information

### **SECTION 13 – DISPOSAL CONSIDERATION**

**Disposal methods** 

The generation of waste should be avoided or minimised wherever possible. Significant quantities of waste product residues should not be disposed of via the foul sewer but processed in a suitable effluent treatment plant. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its container must be disposed of in a safe way. Empty containers or liners may retain some product residues. Avoid dispersal of spilt material and runoff and contact with soil, waterways, drains and sewers.
