

TRANSGEAR LSD 80W-90

SECTION 1 - IDENTIFICATION OF THE MATERIAL AND SUPPLIER

Product Name: TRANSGEAR LSD 80W-90

Product Use: Extreme Pressure Limited Slip Differential Gear Oil

Supplier:Vertex Lubricants NZ

22 Marphona Crescent

Takanini 2105 Phone: 09/640 0004

Email: info@vertexlubricants.co.nz

Emergency Number: 0800 353 645

Chemical Nature: Distillates (petroleum), hydrotreated heavy paraffinic, solvent-dewaxed heavy

paraffinic

Issue Date: 16 July 2024 and is valid for 5 years from this date.

SECTION 2 - HAZARDS IDENTIFICATION

HSNO Classification Not classified.

This material is not classified as hazardous according to criteria in the Hazardous Substances (Hazard Classification)

Notice 2020.

This material is not classified as DANGEROUS GOODS according to criteria in New Zealand Standard 5433:2012 Transport of Dangerous Goods on Land.

GHS label elements

Signal word No signal word.

Hazard statements No known significant effects or critical hazards.

Precautionary statements

Prevention Not applicable.

Response Not applicable.

Storage Not applicable.

Disposal Not applicable.

Other hazards which do not result in classification USED ENGINE OILS

Used engine oil may contain hazardous components which have the potential to cause skin

cancer.

See Toxicological Information, section 11 of this Safety Data Sheet.

SECTION 3 – COMPOSITION / INFORMATION ON INGREDIENTS

Substance/mixture: Mixture

Highly refined base oil (IP 346 DMSO extract < 3%). Proprietary performance additives.

Ingredient name	% (w/w)	CAS number	
Distillates (petroleum), hydrotreated heavy paraffinic	≥60 - ≤75	64742-54-7	
Distillates (petroleum), hydrotreated heavy paraffinic	≥10 - ≤30	64742-54-7	
Distillates (petroleum), solvent-dewaxed heavy	≤3	64742-65-0	

The information contained in this Product Data Sheet is accurate at the time of printing and is subject to change without prior notice.

® Vertex is a registered trademark of Lubricants NZ Ltd.

Vertex Lubricants Tel: 0800 353 645 Email: info@vertexlubricants.co.nz www.vertexlubricants.co.nz

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health or the environment and hence require reporting in this section.

Occupational exposure limits, if available, are listed in Section 8.

SECTION 4 – FIRST AID MEASURES

Description of necessary first aid measures

Inhalation If inhaled, remove to fresh air. In case of inhalation of decomposition products in a fire,

symptoms may be delayed. The exposed person may need to be kept under medical

surveillance for 48 hours. Get medical attention if symptoms occur.

Ingestion Do not induce vomiting unless directed to do so by medical personnel. Get medical

attention if symptoms occur.

Skin contact Wash skin thoroughly with soap and water or use recognised skin cleanser. Remove

contaminated clothing and shoes. Wash clothing before reuse. Clean shoes thoroughly before reuse. Get medical attention if symptoms occur. If skin irritation or rash occurs: Get

medical advice/attention.

Eye contact In case of contact, immediately flush eyes with plenty of water for at least 15 minutes.

Eyelids should be held away from the eyeball to ensure thorough rinsing. Check for and

remove any contact lenses. Get medical attention.

Indication of immediate medical attention and special treatment needed, if necessary

Notes to physicianTreatment should in general be symptomatic and directed to relieving any effects. In case

of inhalation of decomposition products in a fire, symptoms may be delayed. The exposed

person may need to be kept under medical surveillance for 48 hours.

Protection of first aiders No action shall be taken involving any personal risk or without suitable training.

SECTION 5 – FIRE FIGHTING MEASURES

Extinguishing media

Suitable In case of fire, use foam, dry chemical or carbon dioxide extinguisher or spray.

Not suitable Do not use water jet.

Specific hazards arising

from the chemical

Hazardous combustion Combustion products may include the following:

products

carbon oxides (CO, CO2) (carbon monoxide, carbon dioxide) nitrogen oxides (NO, NO2 etc.)

In a fire or if heated, a pressure increase will occur, and the container may burst.

Hazchem code

Not available

Special precautions for

firefighters

No action shall be taken involving any personal risk or without suitable training. Promptly

Special protective

isolate the scene by removing all persons from the vicinity of the incident if there is a fire. Fire-fighters should wear positive pressure self-contained breathing apparatus (SCBA) and

equipment for fire-

full turnout gear.

fighters

SECTION 6 – ACCIDENTAL RELEASE MEASURES

Personal precautions, protective equipment and emergency procedures

For non-emergency If specialised clothing is required to deal with the spillage, take note of any information in

personnel Section 8 on suitable and unsuitable materials. See also the information in "For non-

emergency personnel".

For emergency If specialised clothing is required to deal with the spillage, take note of any information in responders Section 8 on suitable and unsuitable materials. See also the information in "For non-

Section 8 on suitable and unsuitable materials. See also the information in "For non-emergency personnel".

The information contained in this Product Data Sheet is accurate at the time of printing and is subject to change without prior notice.

Environmental precautions

Avoid dispersal of spilt material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution

(sewers, waterways, soil or air).

Methods and material for containment and cleaning up

Small spill Stop leak if without risk. Move containers from spill area. Absorb with an inert material

and place in an appropriate waste disposal container. Dispose of via a licensed waste

disposal contractor.

Large spill Stop leak if without risk. Move containers from spill area. Prevent entry into sewers, water

courses, basements or confined areas. Contain and collect spillage with noncombustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations. Dispose of via a licensed waste

disposal contractor.

SECTION 7 – HANDLING AND STORAGE

Precautions for safe

handling

Conditions for safe storage, including any incompatibilities

Put on appropriate personal protective equipment (see Section 8).

Store in accordance with local regulations. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10) and food and drink. Keep container tightly closed and sealed until ready for use. Store and use only in equipment/containers designed for use with this product. Containers that have been opened must be carefully resealed and kept upright to prevent

leakage. Do not store in unlabeled containers. Use appropriate containment to avoid

environmental contamination.

Not suitable Prolonged exposure to elevated temperature

SECTION 8 – EXPOSURE CONTROLS AND PEROSNAL PROTECTION

Control parameters

Vertex Lubricants Tel: 0800 353 645 Email: info@vertexlubricants.co.nz www.vertexlubricants.co.nz

Biological exposure indices No exposure indices known

Recommended monitoring procedures

Reference should be made to appropriate monitoring standards. Reference to national guidance documents for methods for the determination of hazardous substances will also be required.

Appropriate engineering controls

All activities involving chemicals should be assessed for their risks to health, to ensure exposure is adequately controlled. Personal protective equipment should only be considered after other forms of control measures (e.g. engineering controls) have been suitably evaluated. Personal protective equipment should conform to appropriate standards, be suitable for use, be kept in good condition and properly maintained. Your supplier of personal protective equipment should be consulted for advice on selection and appropriate standards. For further information contact your national organisation for standards. Provide exhaust ventilation or other engineering controls to keep the relevant airborne concentrations below their respective occupational exposure limits. The final choice of protective equipment will depend upon a risk assessment. It is important to ensure that all items of personal protective equipment are compatible.

Individual protection measures

Hygiene measures

Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.

Eye protection Hand protection Safety glasses with side shields.

Wear protective gloves if prolonged or repeated contact is likely. Wear chemical resistant gloves. Recommended: Nitrile gloves. The correct choice of protective gloves depend upon the chemicals being handled, the conditions of work and use, and the condition of the gloves (even the best chemically resistant glove will break down after repeated chemical exposures). Most gloves provide only a short time of protection before they must be discarded and replaced. Because specific work environments and material handling practices vary, safety procedures should be developed for each intended application. Gloves should therefore be chosen in consultation with the supplier/manufacturer and with a full assessment of the working conditions.

۸.

Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

Respiratory protection

Skin protection

In case of insufficient ventilation, wear suitable respiratory equipment. The correct choice of respiratory protection depends upon the chemicals being handled, the conditions of work and use, and the condition of the respiratory equipment. Safety procedures should be developed for each intended application. Respiratory protection equipment should therefore be chosen in consultation with the supplier/manufacturer and with a full assessment of the working conditions.

SECTION 9 – PHYSICAL AND CHEMICAL PROPERTIES

The conditions of measurement of all properties are at standard temperature and pressure unless otherwise indicated.

Appearance

Physical state Liquid.

ColourAmber. [Light]OdourUnfragranced [Slight]pHNot applicable.Melting point/freezingNot available.

SECTION 10 – STABILITY AND REACTIVITY

Chemical stability

The product is stable.

Possibility of hazardous

Under normal conditions of storage and use, hazardous reactions will not occur. Under

normal conditions of storage and use, hazardous polymerisation will not occur.

Conditions to avoid

Avoid all possible sources of ignition (spark or flame).

Incompatible materials

Reactive or incompatible with the following materials: oxidising materials.

Hazardous decomposition

Under normal conditions of storage and use, hazardous decomposition products should

products

reactions

not be produced.

SECTION 11 – TOXICOLOGICAL INFORMATION

Information on likely routes of exposure

Inhalation Exposure to decomposition products may cause a health hazard. Serious effects may be

delayed following exposure.

Ingestion No known significant effects or critical hazards.

Skin contact Defatting to the skin. May cause skin dryness and irritation.

Eye contact No known significant effects or critical hazards.

Symptoms related to the physical, chemical and toxicological characteristics

InhalationNo specific data.IngestionNo specific data.

Skin contact Adverse symptoms may include the following:

irritation dryness cracking

Eye contact No specific data.

Potential chronic health effects

General USED ENGINE OILS

Combustion products resulting from the operation of internal combustion engines contaminate engine oils during use. Used engine oil may contain hazardous components which have the potential to cause skin cancer. Frequent or prolonged contact with all types and makes of used engine oil must therefore be avoided and a high standard of

personal hygiene maintained.

Inhalation Not applicable.

Ingestion Ingestion of large quantities may cause nausea and diarrhea.

Skin contact Prolonged or repeated contact can defat the skin and lead to irritation, cracking and/

or dermatitis.

Eye contact
No known significant effects or critical hazards.
Carcinogenicity
No known significant effects or critical hazards.
Mutagenicity
No known significant effects or critical hazards.
Teratogenicity
No known significant effects or critical hazards.
Developmental effects
No known significant effects or critical hazards.
Fertility effects
No known significant effects or critical hazards.

Aspiration hazard

Name

Distillates (petroleum), hydrotreated heavy paraffinic

SECTION 12 – ECOLOGICAL INFORMATION

Ecotoxicity No known significant effects or critical hazards.

Persistence and degradability

Expected to be biodegradable.

Bioaccumulative potential

This product is not expected to bioaccumulate through food chains in the environment.

The information contained in this Product Data Sheet is accurate at the time of printing and is subject to change without prior notice.

Mobility in soil

Mobility Soil/water partition

coefficient (KOC)

Other ecological

information

Spillages may penetrate the soil causing ground water contamination.

Not available.

Spills may form a film on water surfaces causing physical damage to organisms. Oxygen

transfer could also be impaired.

SECTION 13 – DISPOSAL CONSIDERATION

Disposal methods

The generation of waste should be avoided or minimised wherever possible. Significant quantities of waste product residues should not be disposed of via the foul sewer but processed in a suitable effluent treatment plant. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its container must be disposed of in a safe way. Empty containers or liners may retain some product residues. Avoid dispersal of spilt material and runoff and contact with soil, waterways, drains and sewers.
